HO DO MINH QUAN

Box Hill, Melbourne | 0452-452-989 | dominhquan.ho@gmail.com | https://nauqh.dev/ | linkedin.com/in/nauqh/

Full Stack Engineer building production AI applications, data pipelines, and workflow automation that help businesses run more efficiently. Experienced in LLM integration, retrieval augmented generation (RAG), and AI agents, with systems in production serving 500+ learners at CoderSchool.

PROJECTS

AI TEACHING ASSISTANT | CoderSchool | OpenAI, ChromaDB, Discord.py

- Developed an AI teaching assistant that integrates OpenAI GPT models with Discord to answer student questions across 5 courses, resolving 90% of forum threads each month with 100% positive feedback.
- Built a code and visual analysis engine with GitHub integration that extracts, analyses, and gives feedback on code submissions in multiple programming languages, including image debugging for visualisation errors.
- Implemented a retrieval augmented generation (RAG) pipeline using ChromaDB to search YouTube content and course documents in real time, delivering curated learning materials and reducing teaching staff workload.

E-LEARNING PLATFORM | CoderSchool | Next.js, shadcn/ui, FastAPI, PostgreSQL, AWS S3

- Designed and developed an online learning platform for the Data Science and Full Stack Web Development tracks, delivering 13+ courses and online assessments to 500+ learners, with authentication via Better Auth and Google OAuth.
- Built a scalable content management system using MDX for lesson authoring with AWS S3 integration, implementing automated sync scripts with MD5 hash comparison for incremental updates and efficient version control across 400+ lesson files.
- Engineered interactive in-browser code editors with sandboxed execution environments supporting live Python and SQL query execution with real-time results pagination, enabling hands-on practice without local environment setup.

CUSTOMER SERVICE CHATBOT | Tierra | Pydantic AI, OpenRouter, pgvector

- Developed an AI customer service chatbot integrating OpenAI's model with real-time search and RAG using pgvector to autonomously handle customer inquiries with up-to-date product information, reducing support team workload by 50% and enabling 24/7 instant responses.
- Engineered multi-platform integration across Zalo, Instagram, and Facebook, consolidating customer conversations into a unified system while maintaining natural conversation flow and context awareness. Successfully handled 100+ customer conversations monthly with 80%+ tier-1 inquiry resolution rate.
- Implemented an intelligent escalation system with Zoho CRM integration that automatically identifies complex inquiries requiring human intervention and seamlessly transfers cases to support staff with full conversation history, reducing average response time from 2 hours to under 15 minutes.

EXPERIENCE

CODERSCHOOL — Ho Chi Minh, Vietnam
Automation Engineer — Sep 2023 – Present

- Developed and maintained CoderSchool's online learning platform, which runs online assessments, automated grading, an AI Teaching Assistant, and student and mentor management for 500+ learners across two learning tracks.
- Designed and deployed data pipelines and automation workflows, including ETL processes for monthly operational metrics that cut reporting time by 90%.
- Coordinate the Data Science and Full Stack Web Development curriculum and mentor learners, with 50+ graduates going on to secure job offers.

GOOGLE DEVELOPER GROUP ON CAMPUS — Ho Chi Minh, Vietnam - Melbourne, Australia
Operations Lead — Oct 2020 – Oct 2024

- Lead operations team in organizing 12 technical workshops and community events on Google technologies, managing event logistics, speaker coordination, and member engagement strategies across two international chapters.
- Collaborate with cross-functional teams including marketing, content, and technical leads to deliver high-impact events, achieving 200+ average attendance and 90%+ satisfaction ratings through post-event surveys.

EDUCATION

MONASH UNIVERSITY — Melbourne, Australia
Master of Data Science — Jul 2024 – Jun 2026
Specialisation in Applied Data Analysis | WAM: Distinction
Relevant Coursework: Advanced Database Technology, Data Wrangling, Data Processing for Big Data

Bachelor of Computer Science — Mar 2021 – Jun 2024
Specialisation in Data Science and Software Development| GPA: Distinction
Relevant Coursework: Software Engineering, Data Warehouse and Business Intelligence, Theory of Computation

RELEVANT INFORMATION

Languages: Python, TypeScript, SQL, Java, HTML/CSS
Others: AWS, Google Cloud, React, Git, Linux, Docker, Airflow, PySpark
